

User Manual

This is a graphical user interface of tic-tac-toe. The game opens a first window that contains a welcome message. That window then opens a second window, which gets the users' names from each other. After the users enter their names, a third window opens to the tic-tac-toe game, and it includes the users' names in the top of the screen.

The game operates according to the rules of a standard tic-tac-toe game. The first player will be X, and the second player O. The first to move is X, who will choose one square. Then O will choose a square. The players will alternate choosing squares until either X or O has three squares in a row. If all nine squares in the grid fill up without a user earning three in a row, then the game will end with a tie.

The game is rather straight-forward. Anyone who has played tic-tac-toe and used a computer should know how to operate this game. The second window does require that a person input two names, and those names could be made up of characters or numbers. The window will not allow the user to proceed to the game until the user has entered names for Player 1 and Player 2.

Good luck, players!
